You want to participate?

Register by Wednesday, September 30th at www.lernwerkstatt.ch/remmeet

We are pleased to welcome Cristian Moro to our Remeet with the workshop

Ready for the 21st century learner: from teacher to coach

Artificial Intelligence is rapidly transforming the way learners access information and complete tasks. Instead of seeing AI as a threat, this workshop invites participants to explore it as an opportunity to rethink learning, assessment, and the role of teachers.

Through practical activities, reflection, and collaborative redesign of learning tasks, participants will experience firsthand how AI challenges traditional assignments — and how meaningful, thinking-oriented learning can be strengthened in response.

Objectives

You will:

- experience how easily AI can solve many traditional school tasks.
- critically reflect on what current assignments actually assess.
- identify differences between reproduction, application, and deeper thinking.
- redesign existing tasks to foster authentic learning and critical thinking.
- discover practical AI-resistant task formats for immediate classroom use.
- reflect on the evolving role of teachers in the age of AI.

Content

- AI beats us
- What does our task really assess?
- Hack the task
- 5 practical task formats?
- The changing role of teacher/trainer
- Closing reflection

Facilitator

Cristian Moro

- Train the Trainer
- Communication and behaviour
- Conflict management
